

CIRPASS

Shaping the future of the Digital Product Passport

Funded by the European Commission under the Digital Europe Programme, CIRPASS is a collaborative initiative to prepare the ground for the gradual piloting and deployment of the Digital Product Passport (DPP). CIRPASS is aligned with the requirements of the Proposal for Eco-design for Sustainable Product Regulations (ESPR) and has its focus on developing prototypes for three value chains: electronics, batteries, and textiles.

The project consortium is composed of 31 partners representing thousands of industrial, research, digital, international and standards organisations across Europe and beyond. CIRPASS collaborates with the GBA on DPP for batteries with the GBA being an affiliated partner of the CIRPASS consortium.

The GBA, together with other project partners, will be working to achieve CIRPASS' key objectives, which are:

- Creating a clear concept for the DPP by developing an unambiguous cross-sectoral definition;
- Defining a cross-sectoral product data model for the DPP with demonstrated usefulness for the Circular Economy;
- Creating an inclusive forum facilitating knowledge sharing and discussion on the DPP;
- Building stakeholder consensus on DPP prototypes in three sectors: batteries, textiles and electronics.
